

I ask the FCC to reject NAB's petition 04-160, to allow satellite radio to continue broadcasts of instant traffic and weather. Satellite radio is our radio of choice due to the non-commercial disruptions of regular radio. If you stop them from instant traffic and weather reporting, you could place those listening to satellite radio in danger in areas where this vital information would be needed. I appreciate your utmost consideration in this matter on behalf of all satellite radio subscribers everywhere. Thank you.
